An elegant solution to prevent fogging when wearing a fabric mask is to add a metal bar that, by taking the shape of the nose, prevents air from passing over it. These one are made only using up-cycled materials such as disposable aluminium trays.

Sommaire

- [You will need](#)
- [How to make](#)

The finished size is about 1 cm width and 12 to 14 long, depends of the size of you tray. You can do several bars in a tray. I made seven in a round tray.

Barettes métalliques

ID 2020

You will need

- aluminium disposable tray
- scissors
- a tool to flatten the aluminium (I used a mending egg I had on hand, scissors wrists might do the trick)
- sandpaper or a nail file to smooth the ends.

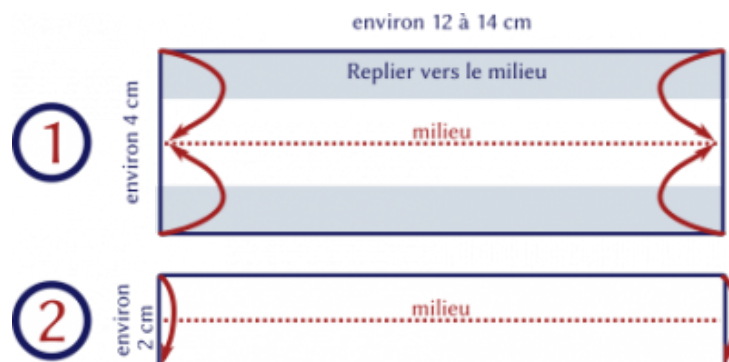

How to make

Cut the tray to flatten it.

Cut strips about 4 cm by 12 to 14 cm long. Flatten well.

Fold the ends towards the middle. Flatten.

Fold in half. Flatten.

Pliage de la bande en aluminium

ID 2020

Round off the ends with scissors and sandpaper to remove any burrs. Flatten well.

It is done !

Masques rayés

Ces deux masques en tissus ont une barrette métallique intégrée dans l'ourlet du haut. Deux coutures verticales sur les côtés bloquent la barrette.
